

■ Base case (Emission Reduction) ■ Input varied ■ Not tested

Main scenarios

Reference	Emission Stabilization	Emission Reduction	Fossil Restriction
No emission cap	Emissions $\leq$ 2023 level	Cap of 30 Mt CO ₂ by 2050	Fossil share falls to 25%

Sensitivity analyses

	Low	Base	High
Hydrogen price (USD/GJ)	13	27	41
Natural gas price (USD/GJ)	13	15	18
Electricity price (USD/GJ)	27	31	35
CCS capital cost (CAPEX)		1×	2×

Sensitivity analyses vary one input at a time over the Emission Reduction scenario (Base); all other inputs stay at base values.
